

REDUCE BUDGETS

With ComTech's ActiveCare Programs you can reduce time on your current IT staffs workload by automating repetitive tasks and having them monitored by us. You will also help your employees be more productive because their workstations are running smoother and there is less downtime due to problems or disasters.

NETWORK INFRASTRUCTURE CONTINUITY

ComTech's ActiveCare BDR provides an array of essential Disaster Recovery services on a flat rate subscription basis to small and medium sized businesses. Backup's can be done on incremental times throughout the day allowing for more recovery opportunities. Servers can be virtualized in case of a complete server failure reducing down-time. Allowing you to worry less about your hardware and more about business.

- Disaster Recovery/Network Infrastructure Continuity Solution that can be fully managed by ComTech.
- Flexible on-site and/or offsite backup solution.
- Intuitive and easy to use software with file level restores available.
- Very frequent backups with offsite replication.
- Easy restoration.

IT solutions that work for your business.

COMTECH'S ACTIVECARE TECHNOLOGY SERVICES.

We can help!

GET PROACTIVE!

Routine maintenance consumes a large portion of an IT budget, whether it is money spent on an outsider to fix the problems, or the time your internal IT staff spends on fixing everyday office technology problems. Rarely is routine maintenance done pro-actively mostly reactive. The net result is more problems, more money and more time spent fixing problems.

ActiveCare from ComTech is a low cost service, available at a fixed monthly price. Change reactive maintenance into proactive maintenance to take care of: deploying patches, managing antivirus updates, removing spyware, temp file deletion, monitoring backups and so many other items. ActiveCare is delivered 24x7 from ComTech to manage and monitor (workstations/laptops/servers).

In short ActiveCare is a proactive approach to managing your IT infrastructure - lowering costs, limiting downtime and causing fewer headaches.

flexible solutions for your business needs

We live in an exciting, explosive, and sometimes dangerous era of technological change. Professional technology expertise is essential to the smooth and profitable functioning of any organization, regardless of size. This expertise must span across several disciplines. ComTech has identified six different functional categories within the IT manager's domain: the *Six P's of Computer Network Management*.

1. **Planning:** Identifying your business goals and finding cost-effective technology to achieve them.
2. **Productivity:** Ensuring that you and your staff have the tools and training needed to get the job done right.
3. **Performance:** Keeping the system humming.
4. **Protection:** Maintaining the security of your data and guarding against data loss.
5. **Procedures:** Developing policies and routines to maintain peak performance.
6. **Proactive:** Be proactive and not reactive to keep ahead of problems

Virus and Spyware removal

Are you getting pop-ups, Virus software out of date, workstations running slow.

We Can Help!
